

AMENDMENTS TO THE CLAIMS

1. (currently amended) A print media for use in an imaging device for personal or office use, the print media comprising:
a first sheet having a printable surface and a second surface opposite the printable surface, wherein the first sheet is rubber; and
a second sheet adhered to the second surface of the first sheet, wherein the second sheet is rigid about the plane of the printable surface;
wherein the first sheet is separable from the second sheet;
wherein the second sheet is adhered to the second surface of the first sheet using a pressure sensitive adhesive interposed between the second sheet and the second surface of the first sheet; and
wherein the pressure sensitive adhesive is configured to remain on the second sheet upon separation of the first and second sheets.

Claims 2-3 (canceled)

4. (currently amended) The print media of claim ~~3~~ 1, further comprising a release agent ~~on the second sheet~~ interposed between the pressure sensitive adhesive and the ~~second~~ first sheet.

Claims 5-8 (canceled)

9. (original) The print media of claim 1, wherein the printable surface contains a surface treatment.
10. (original) The print media of claim 9, wherein the surface treatment is selected from the group consisting of a corona treatment of the printable surface and a print coating applied to the printable surface.

11. (previously presented) The print media of claim 1, wherein the first sheet has a characteristic selected from the group consisting of opaque, translucent and transparent.
12. (original) The print media of claim 1, wherein the second sheet comprises a material selected from the group consisting of paper, high-density polyolefins and polyesters.
13. (currently amended) A print media for use in an imaging device for personal or office use, the print media comprising:
 - a carrier layer;
 - rubber sheet; and
 - an adhesive layer interposed between the carrier layer and the rubber sheet;wherein a side of the rubber sheet opposite the adhesive layer is adapted to accept marking material; and
wherein ~~either the carrier layer or the rubber sheet~~ is adapted to release from the adhesive layer.
14. (currently amended) The print media of claim 13, wherein the adhesive layer comprises a pressure-sensitive adhesive ~~and wherein the carrier layer is adapted to release from the adhesive layer.~~
15. (withdrawn) The print media of claim 13, wherein the adhesive layer comprises a dry adhesive.

Claims 16-20 (canceled)

21. (new) A print media for use in an imaging device, the print media comprising:
a first sheet having a printable surface and a second surface opposite the printable surface, wherein the first sheet is rubber; and
a second sheet having a first surface adhered to the second surface of the first sheet by an adhesive interposed between the first surface of the second sheet and the second surface of the first sheet;
wherein the first sheet is adapted to release from the adhesive.
22. (new) The print media of claim 21, wherein the adhesive is a pressure-sensitive adhesive.
23. (new) The print media of claim 21, wherein the second sheet further comprises a printable surface opposite the first surface of the second sheet.
24. (new) The print media of claim 21, wherein the printable surface contains a surface treatment.
25. (new) The print media of claim 21, wherein the first sheet has a characteristic selected from the group consisting of opaque, translucent and transparent.
26. (new) The print media of claim 21, wherein the second sheet comprises a material selected from the group consisting of paper, high-density polyolefins and polyesters.
27. (new) The print media of claim 21, wherein the adhesive is dry adhesive.
